Introduction

Parker Autoclave Engineers has always been a large user of Air-over-Liquid pump technology and has a lifetime of experience using all variety of pumps in many different configurations. We have used this experience to develop a best-in-breed line of air-driven, high pressure pumps that are efficient to operate, simple in design, and will stand the test of time. Compared to other types of hydraulic pumps, they provide cost effective and energy saving benefits for many applications in the Oil and Gas, Chemical, Industrial and Research industries.

These pumps convert simple air pressure into high and ultra-high liquid pressures by utilizing a large area piston on the air side to move a small area plunger to compress the liquid into very high hydraulic pressures - as high as 60,000 psi (4137 bar). Some designs are for economy, some for manual use, some for low-flow & high pressure, some for high flow & medium pressure... Choice – what a concept! Pumps like these are perfect for product testing, valve actuation, chemical injection and other applications that require intense pressure. When used in conjunction with a Hydraulic Intensifier (another PAE product) pressures to 150,000 psi (10,000 bar) are normal.

Parker Autoclave Engineers has been making pressure and corrosion test systems as well as high pressure laboratory reaction vessels for over 70 years. Packaged Pressure Systems incorporating these Air-Driven, High Pressure Liquid pumps, plus our valves, fittings and other instrumentation was an automatic success story. We have created a wide range of self-contained portable, custom framed modules that “plug and play” for virtually any pressure test, control, or injection system you can imagine. They vary in size, flow capability, output pressure and can include optional features such as chart recording, data logging, cycle counters, injection controllers and almost any kind of electric or pneumatic valve control option.

Pump Series Models

ASL Series:

- Standard Liquid Pump
- Pressures up to 60,000 psi (4137 bar)
- Approximately 6 inches in diameter air piston
- Broad range of ratios

ACL Series:

- Compact Liquid Pump
- Pressures up to 31,900 psi (2199 bar)
- Approximately 3 inches in diameter air piston

ACHL Series:

- ACL Series Pump with hand lever
- Pressures up to 31,900 psi (2199 bar)
- Precise Pressure control operation, pump is spring returned

AHL Series:

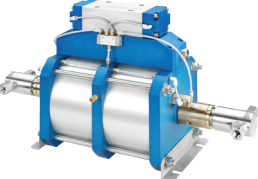

- High Flow Liquid
- Pressures up to 13,300 psi (917 bar)
- Approximately 10 inches in diameter air piston
- Dual Acting

AFL Series:

- High Flow, High Pressure
- Pressures up to 12,500 psi (862 bar)
- Flow up to 3 gpm
- Dual Acting

Drive Types

Pump Model				
Catalog Number Suffix	-01	-02	-1D	-2D
Description	Single Acting, Single Piston	Single Acting, Double Piston	Double Acting, Single Piston	Double Acting, Double Piston

Catalog Number Example: ACL189-01

Quick Reference Guide

Pump Operation

Piston to Plunger Ratio

- Compressed air is used to produce hydraulic pressure
- Works on differential surface area between the large air piston and smaller hydraulic plunger
- Differential is represented by the pressure ratio of the pump

Pressure Ratio = Area of Air Piston ÷ Area of Hydraulic Plunger

- The higher the pressure ratio, the higher the output hydraulic pressure

Pressure Output = Pressure Ratio x Air Drive Pressure

- When air is applied to the pump it will cycle until the forces on the air piston equals the forces on the hydraulic plunger. This is the stall pressure.
- Pump will automatically restart if there is a drop in hydraulic pressure or an increase in air drive pressure.
- Double air pistons available which will double the pressure ratio because you have twice the air piston area acting on the same hydraulic plunger area.

Air Drive Section

- Compressed air is used to produce hydraulic pressure
- Works on differential surface area between the large air piston and smaller hydraulic plunger
- Differential is represented by the pressure ratio of the pump

<p>Section 1</p> <ul style="list-style-type: none"> • Air pilot operated spool provides automatic cycling of air from one side of the piston to the other • At the end of each stroke, the air piston activates a pilot valve that will cause the spool to shift 	
<p>Section 2</p> <ul style="list-style-type: none"> • The spool shifting will supply air to one side of the piston while venting the other side of the piston • This alternating action continues until the pump reaches its stall pressure 	

Typical Pump Cut-Away

	Description		Description
A	Air Inlet	I	Air Piston Bumper
B	Top End Cap	J	Air Piston
C	Air Muffler	K	High Pressure Seal Assembly
D	Air Cylinder	L	Liquid Inlet Connection
E	Bottom End Cap	M	Inlet Check Valve
F	High Pressure Outlet Connection	N	Pump Head Body
G	Outlet Check Valve	O	Hydraulic Plunger
H	Pilot Valve		

Pump Special Features & Benefits

- All Aluminum parts machined from high quality bar stock, not cast aluminum components
- Anodizing with special sealing technique to provide better protection from harsh environments
- Muffler specified to give a great combination of high flow and low noise
- Rubber bumpers in end caps to reduce noise of operation
- Latest lubrication technology provides long seal service life and improves pump efficiency and performance
- No lubricator required for air drive source
- Stainless steel tie-rods and hardware
- Stainless plunger coated with a proprietary multi-layer carbon based coating with diamond like carbon exterior layer:
 - High hardness (3 times harder than Stellite)
 - Inert, it has superior chemical compatibility and corrosion resistance
 - Low friction that limits seal wear and increases efficiency (coefficient of friction equal to or less than PTFE)
 - Tough coating that provides long plunger cycle life. (Have never had to replace a coated plunger during prototype testing)
- Pressure head specially designed and engineered for high cycle life
- Spring energized u-cup seal provides better sealing performance at wide ranges of pressures
- Extended service life check valves with Ceramic balls for high pressure applications

ACL SERIES Single-Acting, Single Piston Air Drive

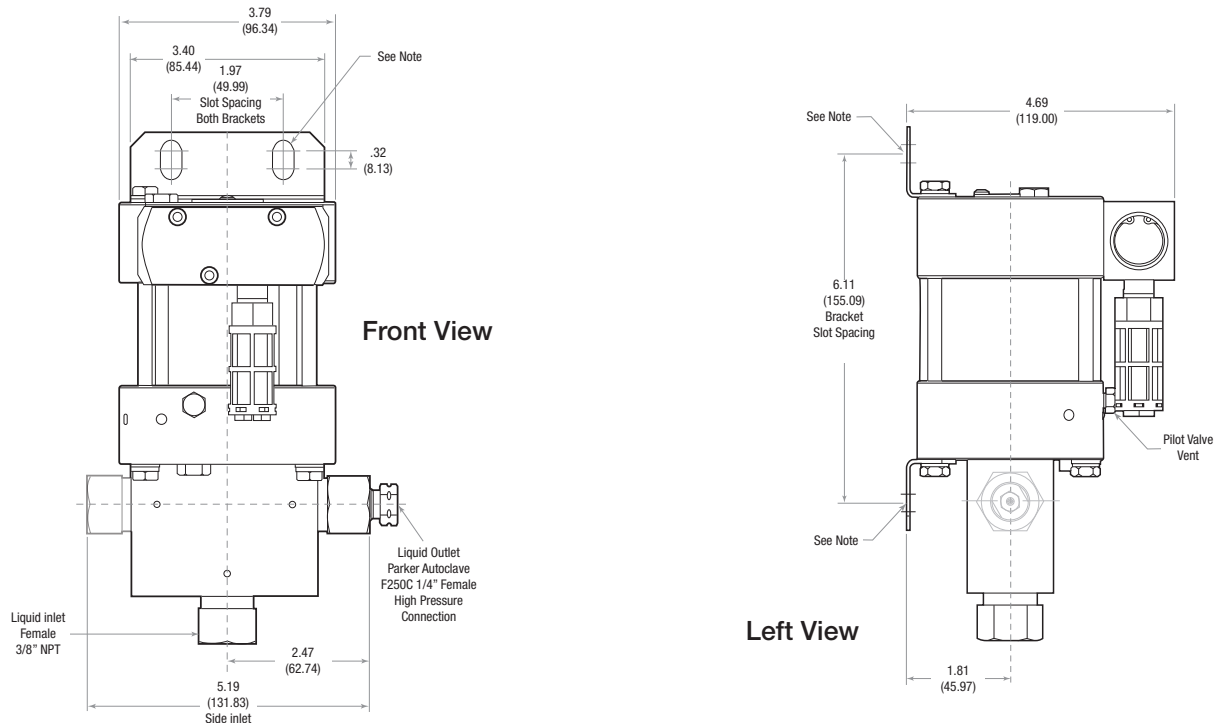

- Single-Acting, Single or Double Piston Air Drive
- Service: Oil, Water, Water/Oil mixture and other fluids depending on material compatibility
- Maximum Operating Temperature: 0-140° F (-18° to 60° C)
- Net Weight: 8 lbs. (3.6 kg)
- Pressure Head: 316 Stainless Steel
- Plunger: 440 Stainless Steel
- Check Valve Glands: 15-5PH Stainless Steel
- Liquid Seal: see Ordering Guide for options
- Air Drive Seals: Buna N

ACHL SERIES Single-Acting, Single Air Drive with Hand Lever

- Single-Acting, Single Air Drive with Hand Lever
- Service: Oil, Water, Water/Oil mixture and other fluids depending on material compatibility
- Standard Hand Lever for precise pressure control, remote locations or emergency back-up applications.
- Maximum Operating Temperature: 0-140° F (-18° to 60° C)
- Net Weight: 8 lbs. (3.6 kg)
- Pressure Head: 316 Stainless Steel
- Plunger: 440 Stainless Steel
- Check Valve Glands: 15-5PH Stainless Steel
- Liquid Seal: see Ordering Guide for options
- Air Drive Seals: Buna N

ASL100 ASL150 ASL250 ASL400	*P = UHMWPE U-Cup UE = Urethane U-Cup

* Standard for stock pumps

Air Drive Connection - All ASL series pumps have a 1/2" FNPT main air drive supply connection and utilize a 1/8" FNPT pilot port connection for remote start/stop operation. It is recommended to operate the pilot port at a higher air pressure than the main air drive supply pressure for proper function.

AHL SERIES Double-Acting, Double Piston Air Drive

- Service: Oil, Water, Water/Oil mixture and other fluids depending on material compatibility
- Maximum Operating Temperature: 0-140° F (-18° to 60° C)
- Pressure Head: 15-5 PH Stainless Steel
- Check Valve Glands: 316 Stainless Steel
- Liquid Seal: see Ordering Guide for options
- Air Drive Seals: Buna N

Reference Guide

Pump Model Series	Pressure Ratio	Maximum Rated Outlet Pressure PSI (bar)	Displacement Per Cycle .in ³ (cm ³)	Liquid Connections	
				Inlet	Outlet
AHL Series					
AHL33-2D	1:67	6,700 (462)	15.3 (250.7)	1" FNPT	1/2" FNPT
AHL66-2D	1:133	13,300 (917)	7.8 (127.8)	1/2" FNPT	1/2" FNPT

Air Drive Connection - All AHL series pumps have a 1" FNPT main air drive supply connection and utilize a 1/8" FNPT pilot port connection for remote start/stop operation. It is recommended to operate the pilot port at a higher air pressure than the main air drive supply pressure for proper function.

Side View

Front View

Note:

Each mounting bracket includes (2) x 9/16" (8.73) slots for 1/2" bolts.
 Bottom inlet pump head and side inlet pump head are mutually exclusive.
 All dimensions are for reference only and are subject to change without notice.
 Primary dimensions: Inches
 Secondary Dimensions: (Millimeters)

Model	A	B
AHL66	32.66 (829.61)	30.16 (766.11)
AHL33	32.41 (823.21)	30.42 (772.41)

Ordering Guide

Typical catalog number example: **AHL66-2DSCUV** (catalog number is created based on customer selection of product parameters, see below for example)

AHL66-2D	S	C	UV
Pump Series Type/Size/Ratio	Liquid Inlet Location	Isolation Chamber	Liquid Seal Material (AHL33 and AHL66)

Packaged Pressure Systems

Since our beginning in 1946, Parker Autoclave Engineers has been the world's market leader in the development and manufacture of high and ultra-high pressure components, valves and systems. At our modern factory in Erie Pennsylvania, USA we have engineers with the specialized experience to design and create products commonly used to control pressures exceeding 100,000 psi (6900 bar) while consistently exceeding customer expectations.

Using the knowledge developed over the last 70 years, Parker Autoclave Engineers Packaged Pressure Systems have been developed to incorporate any of our Air-Driven, High Pressure Liquid pumps, valves and fittings into a wide range of self-contained portable, or custom framed modules that "plug and play" for virtually any test, control, or injection system you can imagine. They vary in size, flow capability, output pressure and can include optional features such as chart recording, data logging, cycle counters, injection controllers and almost any kind of electric or pneumatic valve control option. Applications include: Hydrostatic/Burst/Leak/Functional testing, Chemical injection, Valve/Hose/Gauge testing, Bolt tensioning, Hydraulic Control systems, Laboratory Research and Autofrettage systems.

Portable Pressure Systems

Move your high pressure test stand anywhere you need it to be...

Powder Coated Steel, Stainless Steel or Aluminum Frame Options
Single or Dual Pump Systems with or without reservoir
Utilizes any Combination ASL, ACL, ACHL, AFL, or AHL Air-Driven Liquid Pumps
Outlet Pressures to 60,000 PSI (4140 bar) – Flows to 7.6 GPM (29 lpm)
Vertical or Horizontal Frame Designs with Optional Casters
Totally Self Contained-Electricity not Required, Only Air
All Air Controls Included, No Lubrication Needed
Isolation Valves, Relief Valves, Rupture Disks, Stroke Counters
and other Options Available

Custom Pressure Systems

Modify the Standard Design to Incorporate Specified Instruments or Request Fit-for-Purpose Designs

Powder Coated Steel, Aluminum or Stainless Steel Open/Enclosed Frame Options
Fit-for-Purpose Enclosures/Benches/Reels or Test Chambers
Utilize any Parker Autoclave Engineers Air-Driven Liquid Pump
Options Include All Standard Options plus: Remote Controlled Valves,
Chart Recorders, Data Loggers, PLC or Computer Controls, and Digital Displays.

WARNING

FAILURE, IMPROPER SELECTION OR IMPROPER USE OF THE PRODUCTS AND/OR SYSTEMS DESCRIBED HEREIN OR RELATED ITEMS CAN CAUSE DEATH, PERSONAL INJURY AND PROPERTY DAMAGE.

This document and other information from Parker Hannifin Corporation, its subsidiaries and authorized distributors provide product and/or system options for further investigation by users having technical expertise. It is important that you analyze all aspects of your application and review the information concerning the product or system in the current product catalog. Due to the variety of operating conditions and applications for these products or systems, the user, through its own analysis and testing, is solely responsible for making the final selection of the products and systems and assuring that all performance, safety and warning requirements of the application are met. The products described herein, including without limitation, product features, specifications, designs, availability and pricing, are subject to change by Parker Hannifin Corporation and its subsidiaries at any time without notice.

Offer of Sale

The items described in this document are available for sale by Parker Hannifin Corporation, its subsidiaries or its authorized distributors. Any sale contract entered by Parker will be governed by the provisions stated in Parker's standard terms and conditions of sale (copy available upon request).

Caution! Do not mix or interchange component parts or tubing with those of other manufacturers. Doing so is unsafe and will void warranty.

Caution! Parker Autoclave Engineers Valves, Fittings, and Tools are not designed to interface with common commercial instrument tubing and are designed to only connect with tubing manufactured to Parker Autoclave Engineers AES specifications. Failure to do so is unsafe and will void warranty.
